Alex Example

Platform engineer / Go / Kubernetes

TOOLKIT

Go | C / C++ | Distributed Systems | Data Platforms (Kafka, Spark) | Kubernetes | Terraform | AWS / GCP | Observability / SRE

EXPERIENCE

2022-Present
Example Studio
Remote

Founder and Principal Engineer

- Rebuilt the deployment pipeline so that every service shipped through the same reviewed path, which cut release preparation from days to under an hour
- Ran the container platform and its monitoring through a period of fast growth, keeping the service within its availability target
- Moved a legacy reporting system onto managed storage, checking every migrated record against its source before the old system was retired

TECH
Go, Kubernetes, Terraform, PostgreSQL, Kafka, Prometheus, Grafana, AWS, GCP

2020-2022
Harbour Logistics
Rotterdam, The Netherlands

Lead Infrastructure Engineer

- Rebuilt the deployment pipeline so that every service shipped through the same reviewed path, which cut release preparation from days to under an hour
- Ran the container platform and its monitoring through a period of fast growth, keeping the service within its availability target
- Moved a legacy reporting system onto managed storage, checking every migrated record against its source before the old system was retired
- Introduced load testing to the release process, so capacity problems surfaced in staging instead of during traffic peaks
- Wrote the operating guides and trained the internal team to run the platform after handover

TECH
Go, Kubernetes, Terraform, PostgreSQL, Kafka, Prometheus, Grafana, AWS, GCP

2018-2020
Northwind Finance
Amsterdam, The Netherlands

Senior Platform Engineer

- Rebuilt the deployment pipeline so that every service shipped through the same reviewed path, which cut release preparation from days to under an hour
- Ran the container platform and its monitoring through a period of fast growth, keeping the service within its availability target
- Moved a legacy reporting system onto managed storage, checking every migrated record against its source before the old system was retired
- Introduced load testing to the release process, so capacity problems surfaced in staging instead of during traffic peaks

TECH
Go, Kubernetes, Terraform, PostgreSQL, Kafka, Prometheus, Grafana, AWS, GCP

2016-2018
Contoso Telemetry
Utrecht, The Netherlands

Site Reliability Engineer

- Rebuilt the deployment pipeline so that every service shipped through the same reviewed path, which cut release preparation from days to under an hour

- Ran the container platform and its monitoring through a period of fast growth, keeping the service within its availability target
- Moved a legacy reporting system onto managed storage, checking every migrated record against its source before the old system was retired
- Introduced load testing to the release process, so capacity problems surfaced in staging instead of during traffic peaks
- Wrote the operating guides and trained the internal team to run the platform after handover

TECH
Go, Kubernetes, Terraform, PostgreSQL, Kafka, Prometheus, Grafana, AWS, GCP

2014-2016
Fabrikam Games
London, United Kingdom

Full-Stack Developer

- Rebuilt the deployment pipeline so that every service shipped through the same reviewed path, which cut release preparation from days to under an hour
- Ran the container platform and its monitoring through a period of fast growth, keeping the service within its availability target
- Moved a legacy reporting system onto managed storage, checking every migrated record against its source before the old system was retired

TECH
Go, Kubernetes, Terraform, PostgreSQL, Kafka, Prometheus, Grafana, AWS, GCP

2012-2014
Tailspin Services
Leeds, United Kingdom

Systems Administrator

- Rebuilt the deployment pipeline so that every service shipped through the same reviewed path, which cut release preparation from days to under an hour
- Ran the container platform and its monitoring through a period of fast growth, keeping the service within its availability target
- Moved a legacy reporting system onto managed storage, checking every migrated record against its source before the old system was retired
- Introduced load testing to the release process, so capacity problems surfaced in staging instead of during traffic peaks

TECH
Go, Kubernetes, Terraform, PostgreSQL, Kafka, Prometheus, Grafana, AWS, GCP
